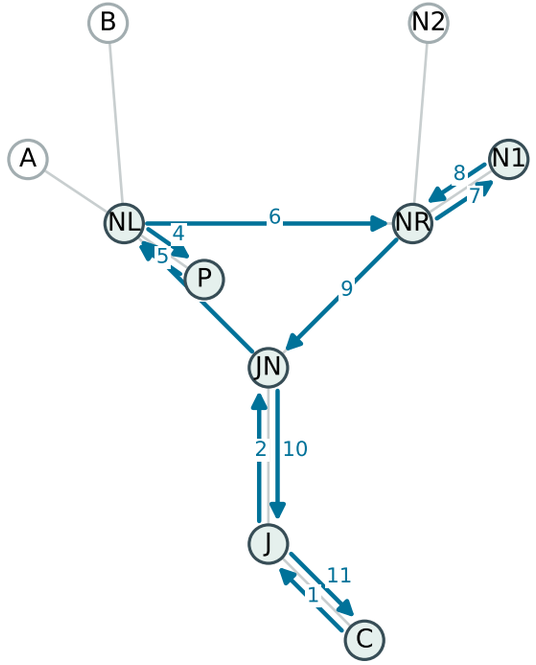
T19: actual retained trajectories across native agents

Post hoc illustration; every session remains in the complete tables and all-task plots.

Updated GenericAgent / retained native memory

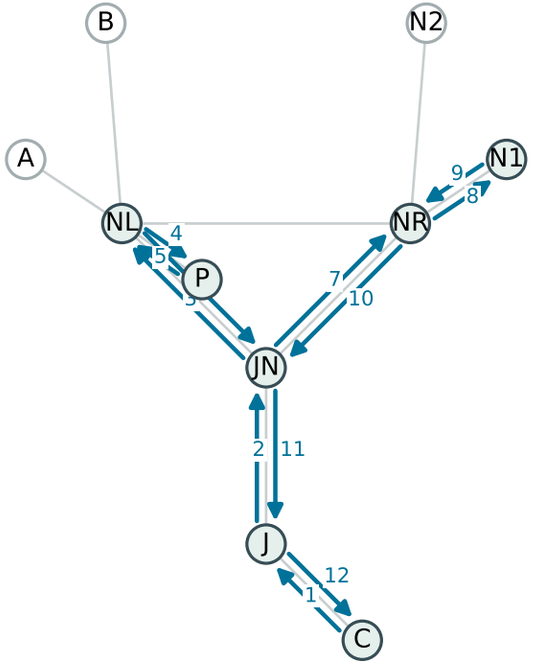


Path: C > J > JN > NL > P > NL > NR > N1 > NR > JN > J > C

N1: process OK

Success=True | distance=15 | moves=11 | ops=13

Hermes / retained native memory



Path: C > J > JN > NL > P > NL > JN > NR > N1 > NR > JN > J > C

N1: process OK

Success=True | distance=16 | moves=12 | ops=14

Arrows and numbers are actual movement order; node operations are listed below each graph.
Distance and operation count are separate descriptions. The task brief does not explicitly minimize weighted distance.
