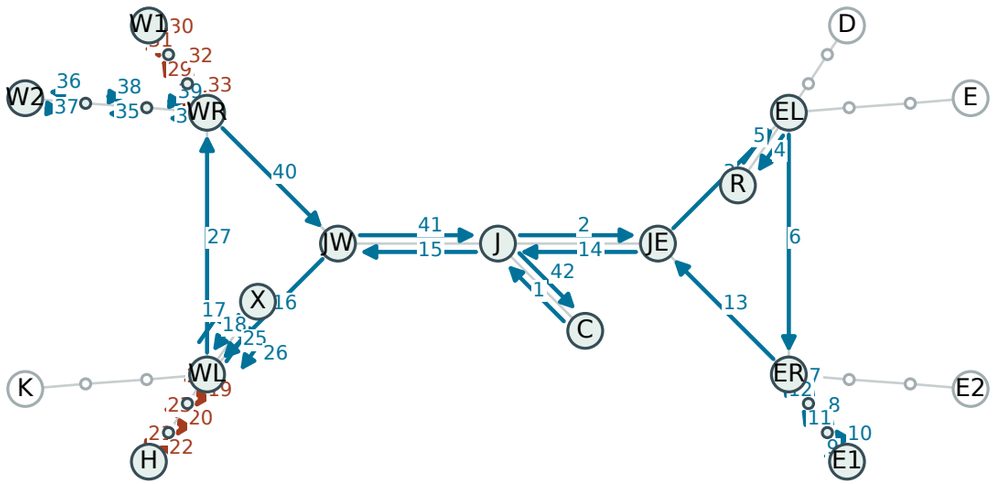
T16: matching first choice in stage 1, mismatching first choice in stage 2

Post-hoc illustration; corresponding literal facts are verified in the actual decision inputs. All tasks are reported separately.

T16 / Retained native memory

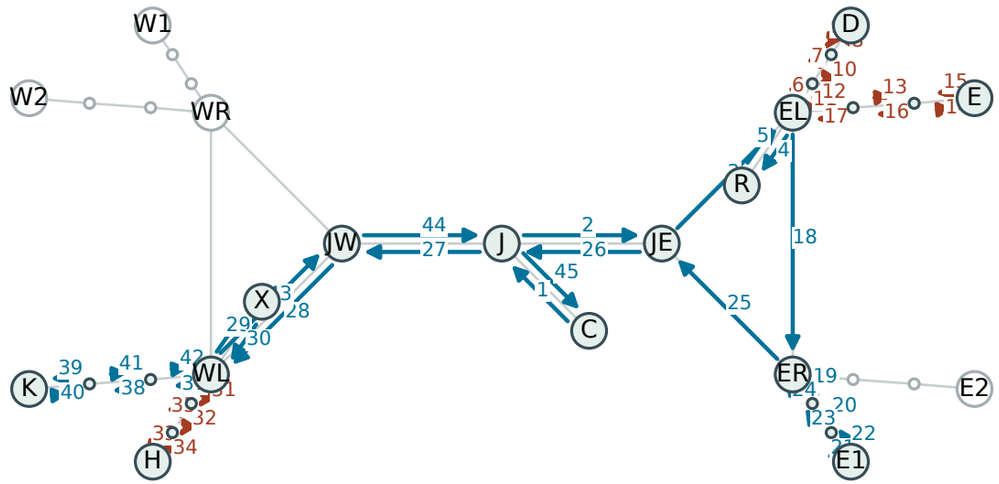


Path: C > J > JE > EL > R > EL > ER > e1p1 > e1p2 > E1 > e1p2 > e1p1 > ER > JE > J > JW > WL > X > WL > hp1 > hp2 > H > hp2 > hp1 > WL > X > WL > WR > w1p1 > w1p2 > W1 > w1p2 > w1p1 > WR > w2p1 > w2p2 > W2 > w2p2 > w2p1 > WR > JW > J > C

E1: process OK; H: process unsupported; W1: process unsupported; W2: process OK

Success=True | distance=52 | moves=42 | ops=47

T16 / Baseline native memory



Path: C > J > JE > EL > R > EL > dp1 > dp2 > D > dp2 > dp1 > EL > ep1 > ep2 > E > ep2 > ep1 > EL > ER > e1p1 > e1p2 > E1 > e1p2 > e1p1 > ER > JE > J > JW > WL > X > WL > hp1 > hp2 > H > hp2 > hp1 > WL > kp1 > kp2 > K > kp2 > kp1 > WL > JW > J > C

D: process unsupported; E: process unsupported; E1: process OK; H: process unsupported; K: process OK

Success=True | distance=55 | moves=45 | ops=51

Arrows and numbers: all actual moves in order. Dashed red: trip containing unsupported processing.
Grey: public roads. Text lists station operations. Fact delivery and action compatibility do not prove internal memory causality.
