Fixed scripted witness: two complete stages in one task

Predeclared family endpoints, not best-world selection. All worlds are included in calibration.

Path: C > J > JN > NR > Q > NR > n1p1 > n1p2 > N1 > n1p2 > n1p1 > NR > n2p1 > n2p2 > N2 > n2p2 > n2p1 > NR > NL > ap1 > ap2 > A > ap2 > ap1 > NL > JN > J > JS > SR > V > SR > s1p1 > s1p2 > S1 > s1p2 > s1p1 > SR > s2p1 > s2p2 > S2 > s2p2 > s2p1 > SR > SL > fp1 > fp2 > F > fp2 > fp1 > SL > JS > J > C

N1: process unsupported; N2: process unsupported; A: process OK; S1: process unsupported; S2: process unsupported; F: process OK

Success=True | distance=64 | moves=52 | ops=59

Arrows are actual commutes; numbers show order. Dashed red routes contain unsupported processing.
Small unlabelled dots are real transit locations. No edge is inserted or removed. These are scripted traces, not agent results.
